

THE POWER OF
REDARC

BCDC CORE IN-CABIN DC-DC CHARGERS

BCDCN1225

BCDCN1240

REDARC are pleased to announce the release of the new BCDC Core in-cabin 12V DC charger range.

Available in both 25A and 40A variants, the new BCDC Core is the perfect DC to DC charging solution for auxiliary batteries inside the cabin or canopy.

The BCDC Core25 and Core40 feature REDARC's tried and tested DC charging tech plus an MPPT solar regulator and built in smart battery isolator in the familiar and compact BCDC form factor. Green Power Priority allows the Core to charge from both the vehicle's alternator and solar simultaneously.

The BCDC Core can source power from 12V & 24V alternators plus 12V nominal solar panels and is compatible with all common 12V lead acid or LiFePO4 lithium auxiliary batteries.
