**NARVA®**  
THE VISION TO GO FURTHER

Narva's modern and stylish 5<sup>3</sup>/<sub>4</sub>" L.E.D headlamp has been developed as a direct replacement for halogen headlamp inserts and includes a H4 connector for easy retrofit. Styled with a black chrome finish combined with precision free form optics the 5<sup>3</sup>/<sub>4</sub>" headlamp has been specifically designed and tested for OEM's to deliver a modern appearance on transport vehicles.

An Impact resistant polycarbonate lens ensures the lamp stays clear and well protected against damage from deflecting rocks, roadside debris and harsh conditions. The specially designed housing is made of die-cast aluminium that is corrosion and impact resistant. The lamp's built in reverse polarity, over voltage protection and active thermal management system delivers the ultimate reliability.

Advanced L.E.D technology used in the lamp creates a whiter, cleaner colour temperature, representative of daylight conditions and displaying truer colour tones reducing eye fatigue. The multi-volt design (9-33V) means the lamp is compatible with both 12 and 24 volt systems. Inside, the solid-state L.E.D design is free of filaments and bulb tubes, leaving it unaffected by even the most rigorous shock and vibration.

### FEATURES:

- Superior white light L.E.D performance 6000°K
- Modern black chrome finish with precision free form optics
- Extreme shock and vibration resistance
- Virtually unbreakable polycarbonate lens
- "ECE" and ADR approved
- Fully sealed and weatherproof (IP68 & IP69K)
- EMC-R10 / CISPR 25 approved
- H4 connector for easy retrofit
