INJECTOR & TOP END CLEANER

Jayrad Petrol and Diesel Injector Cleaners consist of a high strength blend of solvents, surface active agents and sludge dispersants for engine top-end cleaning and decarbonising by addition to the fuel tank or by using automatic flushing equipment.

Fuel injectors should be maintained in peak condition to ensure your engine is operating efficiently providing optimum power and minimum fuel use.

City stop - start driving and low quality fuel causes unburnt fuel to form deposits on the fuel injector nozzles which in turn deforms the spray pattern to the cylinders and results in poor engine performance.

The addition of Jayrad Injector Cleaner to the fuel tank on a regular basis ensures that the complete fuel system is maintained in good condition preventing carbon build up in the injectors and inlet valves and poor atomisation of the fuel.

Jayrad Injector Cleaners Benefits:

- Helps clean injectors, valves & combustion chambers
- Restores power loss from fouled injectors & allows smoother engine running
- Reduces exhaust emissions
- Improves engine efficiency & fuel economy

Directions For Use

Add Injector Cleaner directly to full fuel tank at up to 125ml per standard tank of fuel (70L).

Over dosing will not harm the engine.

Jayrad Injector Cleaner should be added to all stored fuel to dissipate any accumulation of water caused by condensation or other means of water contamination of the fuel. This will ensure there is no build up of algae in the fuel which can cause fuel filter blockages and poor fuel quality.

Part No: PIC20

Jayrad Petrol Injector Cleaner is suitable for use in all petrol engines, dissipates water in the fuel and helps prevent algae formation.

Part No: DIC20

Jayrad Diesel Injector Cleaner is suitable for use in Common Rail and Direct injection diesel engines.
