SPORT | HP2 BRAKE PADS

ULTIMATE RELIABILITY

Reliable even in extreme conditions

Brembo Racing Sport HP2 brake pads are designed and tested prevalently for sports use on the road.

They offer outstanding performance levels even without being pre-heated and at low speed, thanks to a specific compound that generates constant friction across the entire temperature range.

This material ensures outstanding silent operation and increased durability for both the brake disc and the pad itself.

Designed to be interchangeable with original equipment brake pads (OE), they are approved to ECE-R90.

SPORT | TY3 BRAKE DISCS

WELCOME TO THE UPGRADE WORLD

Reliable on the road, superior on the track

The brake discs in the Brembo Racing Sport TY3 range are ideal for enthusiasts who use their vehicles for both normal road use as well as high performance driving.

The new Brembo Racing Sport brake disc differs from the previous version with two easily recognisable features: by using Type3 slotting and the Brembo logo engraved on the braking surface.

The Type3 slotting is the result of years of research and development conducted by the Brembo Racing Department and resembles the design of the discs used in the most competitive motorsports championships such as the 24 Hours of Le Mans and is used in the WTCR World Championship.

Compared with an original equipment disc, the new Brembo Racing Sport TY3 guarantees smoother brake pedal feel, improved performance, stability and resistance to fading.

The Sport TY3 brake discs are plug-and-play since they replace OE discs directly.
