BCDC ALPHA

Introducing the next generation of DC - DC battery chargers: the BCDC Alpha.

Available in both 25A and 50A models, the new BCDC Alpha delivers cutting-edge charging technology in a rugged IP67/69K rated package built to withstand the toughest conditions.

It's the only DC-DC charger that offers start battery charging and recovery. Use excess solar power to maintain your start battery and recover a flat one with a single button press or remotely via the smartphone app.

Installation has never been simpler, thanks to a user-friendly pushbutton interface, screw terminals, and input current limiting capabilities. The BCDC Alpha will launch alongside a range of compatible wiring harnesses and mounting brackets.
