

Ultimate protection for your 4x4, no matter the conditions or path you are faced with.

Designed & Made in Australia. Established 1981

For decades Safari 4x4 Engineering has designed and manufactured automotive snorkels and 4WD performance systems made to enhance the performance, durability and driveability of 4x4 vehicles. From the Amazon to the Andes – from the Kalahari to the Kimberley – from the Sahara to the Simpson, four wheel drivers across the globe have put their trust in genuine Safari Products.

MODELS AVAILABLE TO COOLDRIVE

V-SPEC SNORKELS

The V-Spec range primarily suits current model vehicles.

- Manufactured from Safari's own Industrial Spec UV Stabilised Polyethylene material.
- Available for most popular, current model 4wd vehicles.
- Stainless steel mounting hardware & EPDM moulded rubber connection hoses to ensure the snorkel lasts the vehicle lifetime.
- Water tight raised air intake for ultimate engine protection against water and dust ingress.

ARMAX SNORKELS

The Safari ARMAX™ performance range of Snorkels feature:

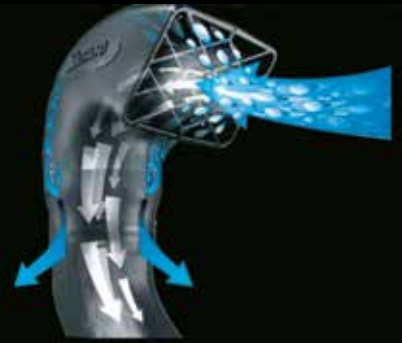

- Designed and flow tested by our in house engineers for maximum performance.
- Dynamometer tested to ensure proven results.
- Safari's water separating style Air Ram with a 4" (101.6mm) outlet and an optimised air flow, low restriction grill.
- Water tight raised air intake for ultimate engine protection against water and dust.

ULTIMATE PROTECTION

A minimal amount of water ingested into a diesel engine is enough to cause an engine to fail. Safari Snorkels move the air intake to a higher position to give you the ability to navigate off road conditions that involve water and dust in the vehicle's path.

The Safari Air Ram simultaneously removes the maximum volume of water from the incoming air stream with its unique water separating technology, while efficiently flowing the maximum required airflow.

As well as water, dust can be equally as damaging to your 4x4's engine. By raising the air intake to the roof level of the vehicle, a Safari Snorkel provides cleaner air to your engine that's free from low lying dust in the vehicle's path.

AIRFLOW TESTED

Safari 4x4 Engineering's purpose built 1200cfm in-house air-flow bench ensures that every snorkel model is designed to supply the optimum amount of air to your 4x4's engine.engine modifications.

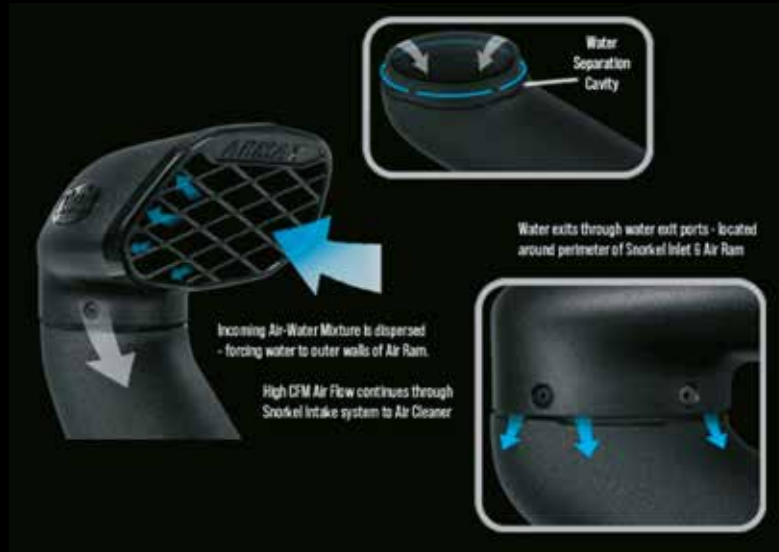

UV 20/24 TESTED

Many inferior products lose colour and strength in a short period of time once exposed to the elements. For Safari to ensure that every snorkel is UV rated to retain shape, strength and colour in the harshest temperatures we can find.

+100°C RATING

The snorkel is rated to withstand temperatures in excess of 100°C. This ensures survival in the harshest conditions on the planet.
