## GPS Trailer Odometer

**Accurately measures the distance travelled by your trailer**

Hummingbird Electronics is proud to announce the release of our GPS Trailer Odometer.

It is a device that is permanently mounted to a trailer, namely a camper trailer or caravan with the sole purpose of recording the distance travelled.

Traditionally, trailers and caravans are not manufactured with odometers which makes it difficult to accurately and conveniently maintain a log of distance travelled. This can make it much more difficult to schedule routine servicing and as a result, potentially compromise the lifespan of the trailer.

The HMOD1000 comes supplied with an easy-to-read colour screen which notifies the user when a service interval has been reached. It also comes with a standard GPS bulk head antenna and mounting bracket.

Incorporating customisable service intervals allows the user or service agent to set a specified date for a reminder and/or set a distance travelled with adjustments between values of 100km, 500km, 1,000km and 10,000km.

An internal buzzer can be set to provide an audible warning of when a defined distance has been reached. There is also the added ability to display a trip A or B, enabling the user to record individual trips travelled.

The HMOD1000 GPS Trailer Odometer is the perfect device for manufacturers, dealerships, rental businesses, service agents and end users who wish to accurately measure distance and ultimately improve the maintenance of their trailers.

### FEATURES:

- Multi voltage compatible(12 or 24 volt)
- Colour digital LCD display
- Programmable service intervals by distance and/or date
- Resettable trips A and B
- Password protected
- Accurate GPS & GLONASS distance measurement
- Australian designed and manufactured
