

INTRODUCING TEXTAR COMMERCIAL BRAKING SOLUTIONS TO THE COOLDRIVE AUTO PARTS PORTFOLIO

PADS / ROTORS / BRAKE LININGS

As the world's leading brand for commercial vehicle brake friction and the leading supplier of brake pads and linings to both the O.E. sector and the aftermarket, Textar offers the performance and safety that only the original can guarantee.

That's why 70% of all commercial vehicles in Europe are fitted with Textar brake linings as standard.

- Textar's new lightweight disc brake pads combine safety with sustainability.
- Their ultra-strong, yet lightweight design contributes to lowering fuel consumption and emissions, so they're better for you and for the environment, too.

Because the braking of a vehicle requires far more energy than its acceleration, brake pads and linings in commercial vehicles are continually exposed to high stresses.

Example: With an engine power of 340 kW, a 40t truck can accelerate to 80 km/h in 45 seconds. In contrast, full emergency braking from 80 to 0 km/h in 3 seconds requires a braking power of 3,300 kW.

An unbelievably high stress factor for the rather small friction component. Compromises in terms of quality can quickly become very expensive.
