## S-DRIVE ELECTRONIC THROTTLE CONTROLLER

### WHAT IS AN S-DRIVE & HOW DOES IT WORK?

An S-Drive is an electronic throttle controller that works on modern vehicles that use "fly by wire" throttle technology, in other words, vehicles without an accelerator cable. Most fly by wire vehicles have a delay from the moment the accelerator pedal is pressed, to the time the signal gets to the throttle, otherwise known as "lag". The S-Drive reduces (and in some vehicles, eliminates) lag by giving you the ability to adjust the throttles sensitivity.

The S-Drive can be adjusted to suit any driving style with 5 DRIVING MODES to choose from, including:

- **COMFORTABLE MODE:** Designed for smooth acceleration. Adjustable sensitivity levels (1>9).
- **SPORTS MODE:** Improves the instantaneous acceleration. Adjustable sensitivity levels (1>9).
- **PERFORMANCE MODE:** This mode is designed for maximum acceleration. Adjustable sensitivity levels (1>9).
- **ECO FUEL SAVING MODE:** Designed for fuel saving with slower & smoother acceleration. Adjustable sensitivity levels (1>9).
- **ORIGINAL MODE:** In this mode the vehicle reverts back to the factory setting. Not Adjustable.

The S-Drive is a perfect fit for towing trailers, caravans or if you simply want to get better response out of your vehicle. The S-Drive suits all types of transmissions and petrol/diesel engines. In most cases, you can install the S-Drive in as little as 5 minutes with the help of the fitting guide.

- ✓ Plug & play technology. No wiring required
- ✓ Shortens response time between accelerator & throttle
- ✓ Perfect for towing as it gets you up to speed quicker
