Manual Override

2 Year Warranty

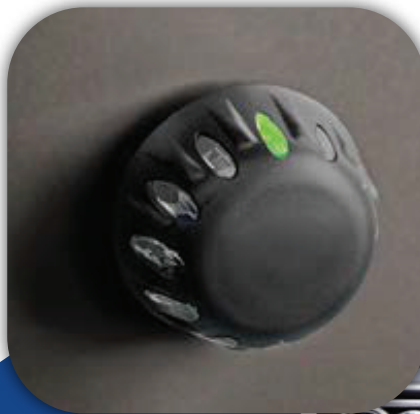

PART # 06100

The New Standard In Trailer Brake Controllers

Australia's leading authority on towing, Hayman Reese, has released a new proportional electric brake controller featuring patented technology which delivers an incredibly smooth braking experience.

The new Ultimate Assist Proportional Brake Controller applies brake pressure to your trailer in direct proportion to the pressure being applied to the tow vehicle brakes.

Patented Technology

What makes the Hayman Reese Ultimate Assist controller different is it's unique, patented technology.

The patented Auto Boost function produces the smoothest possible braking experience by ensuring an adaptive rate of braking application.

This removes the shuddering or trailer 'brake slap' usually experienced at slow speed, resulting in a consistently smooth braking experience.

Dash-Mounted Controller

The Ultimate Assist is operated by a stylish, illuminated dial which can be mounted in a range of locations and blends into any vehicle interior.

The dial indicates the brake setting by increasing it's light intensity as higher settings are selected.

There are 21 settings in total allowing the operator to select the precise amount of braking assistance required.
