

THE POWER OF
REDARC

REDVISION SYSTEM

NEW PRODUCT RELEASE

A compact and flexible power control solution for caravan, camper and 4x4 applications, the Rogue RedVision System combines smart battery charging, real-time monitoring, and device control in one compact package.

The TVMS Rogue allows complete control of multiple on-board devices including lights, fans, fridges, and pumps. Each of its 10 output channels include dimming and the built-in switch inputs make the Rogue perfect for lighting circuits. With the Rogue connecting up to 8 physical switches, control is not just limited to the RedVision screen or app but allows for lights to be controlled from each room of a caravan.

The included Manager30 battery manager keeps your secondary batteries charged from multiple sources all while giving you battery level information in real-time, so you can relax knowing your power is in good hands.
