

BOSCH **QuietCast Brake Pads**

Experience the difference with QuietCast brake pads, where industry leading technology meets unparalleled performance and represents Bosch's enduring legacy of automotive excellence and innovation.

Bosch's cutting-edge QuietCast brake pads capitalise on durable technology, meticulously crafted and made within Bosch's modern production facilities.

QuietCast brake pads incorporate advanced multilayer rubber core shims, setting the standard for a premium connection between rubber and steel. This innovative design guarantees a serene operational performance, minimising noise during braking.

Ceramic Material, Copper Free & Convenient Installation

QuietCast brake pads incorporate the latest Ceramic friction formulations to deliver class-leading performance and reliability. The copper free brake pads outperform the last generation friction materials they replace with better stopping power, fade resistance, pad life and noise suppression.

QuietCast brake pads are packaged with all necessary accessories in the box, simplifying the installation process and saving time for the workshop.

With an expanded range that caters to a diverse array of vehicles, QuietCast brake pads continues to uphold Bosch's commitment to excellence and customer satisfaction.

Development & Manufacturing

The development of QuietCast brake pads represents a significant milestone in Bosch's storied history of brake system innovation. Leveraging decades of automotive expertise.

QuietCast brake pads are made and designed in Bosch's own brake pad manufacturing plant. In house developed friction allow a selection of formulations based on OE performance requirements to exceed key regulations such as ECE90.

During, development extensive performance and NVH dynamometer testing along with extreme environment testing ensures Bosch QuietCast brake pads demonstrate a high level of performance and service life before being approved for sale.

QuietCast brake pads are vehicle match engineered to determine the best match of advanced Ceramic friction formulations.

BOSCH

QuietCast Brake Pads

What drives you, drives us

Bosch makes a substantial investment each year in the research and development of braking products and systems and is the world's leading supplier of anti-lock braking systems (ABS), traction control systems (TCS) and electronic stability programs (ESP).

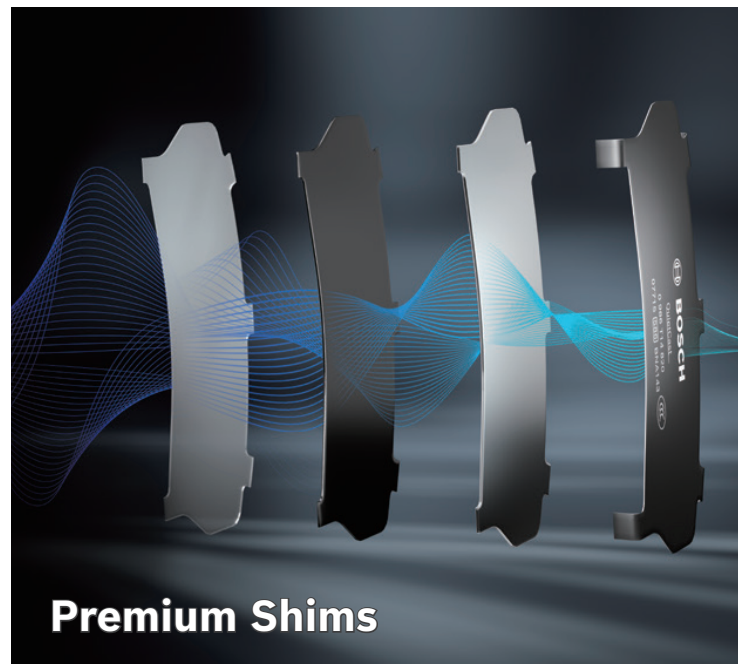

With continuous development and the use of innovative techniques and materials, Bosch assures product quality through constant checks during the entire production process.

QuietCast brake pads are more than just a component of a vehicle's braking system; they embody Bosch's unwavering dedication to quality, safety, and innovation.

Whether navigating city streets or cruising down the highway, drivers can trust Bosch QuietCast to deliver exceptional braking performance with minimal noise and maximum peace of mind.

Zirconia Coating

Premium Shims

Reduced Wear & Extended Life

- Zirconia coating for a longer life, through reduced wear.
- The formation of a protective transfer layer leading to improved disc recovery.

Premium shims, further enhancing their silent operation

- The high quality shims not only minimize noise but also provide increased strength, ensuring optimal performance under various driving conditions.

Ceramic Material, Copper Free & Convenient Installation

- Incorporates the latest Ceramic friction formulations to deliver class-leading performance and reliability
- Packaged with all necessary accessories in the box, simplifying the installation process.
